We envision:
'āina momona.
 Abundant and healthy ecological systems in Hawai'i that contribute to community well-being.

This will take: Powerful and connected communities stewarding Hawaiian lands, waters and culture (community-based natural resource management).

We'll know this has happened when the following conditions are a broad-based reality in Hawaii:

<p>Communities are decision-makers</p> <ul style="list-style-type: none"> # of communities participating in decision-making processes % decisions that go the way communities want them to go 	<p>Community practitioners are resource managers</p> <ul style="list-style-type: none"> area under active community management #educated by communities % decrease in threats to resources #new management approaches %increase in biomass 	<p>Sustainable community-based organizations</p> <ul style="list-style-type: none"> # nonprofit BMPs utilized mix of fundraising strategies utilized 	<p>Communities adapt to changing conditions</p> <ul style="list-style-type: none"> # communities doing monitoring & evaluation
--	--	---	--

We will achieve these conditions through these activities:

<p>gatherings</p> <ul style="list-style-type: none"> # communities at gathering # people at gatherings % attending who apply learning at home # new biocultural management tools used in communities 	<p>training and tools</p> <ul style="list-style-type: none"> # people attending trainings # of people using/requesting tools %increase in knowledge %satisfied that training increased their level of knowledge % communities trained who are implementing training within one year 	<p>facilitation, consultation and technical assistance</p> <ul style="list-style-type: none"> # communities who perceive that they are reaching goals, making progress \$ brought to communities # new biocultural management tools used in communities 	<p>network building</p> <ul style="list-style-type: none"> # incidences of skill exchanges # links made between communities and resource agencies/partners # new biocultural management tools used in communities #\$ resources received and utilized through networking 	<p>advocacy</p> <ul style="list-style-type: none"> # positive mentions # new regulations that contribute to improved biocultural management # agencies seeking input from KUA 	<p>backbone support organization</p> <ul style="list-style-type: none"> %increase in non-profit health scorecard score mix of fundraising strategies utilized ratio funding from grants vs individuals \$ of operating reserves %perceive values alignment
---	---	---	---	---	--

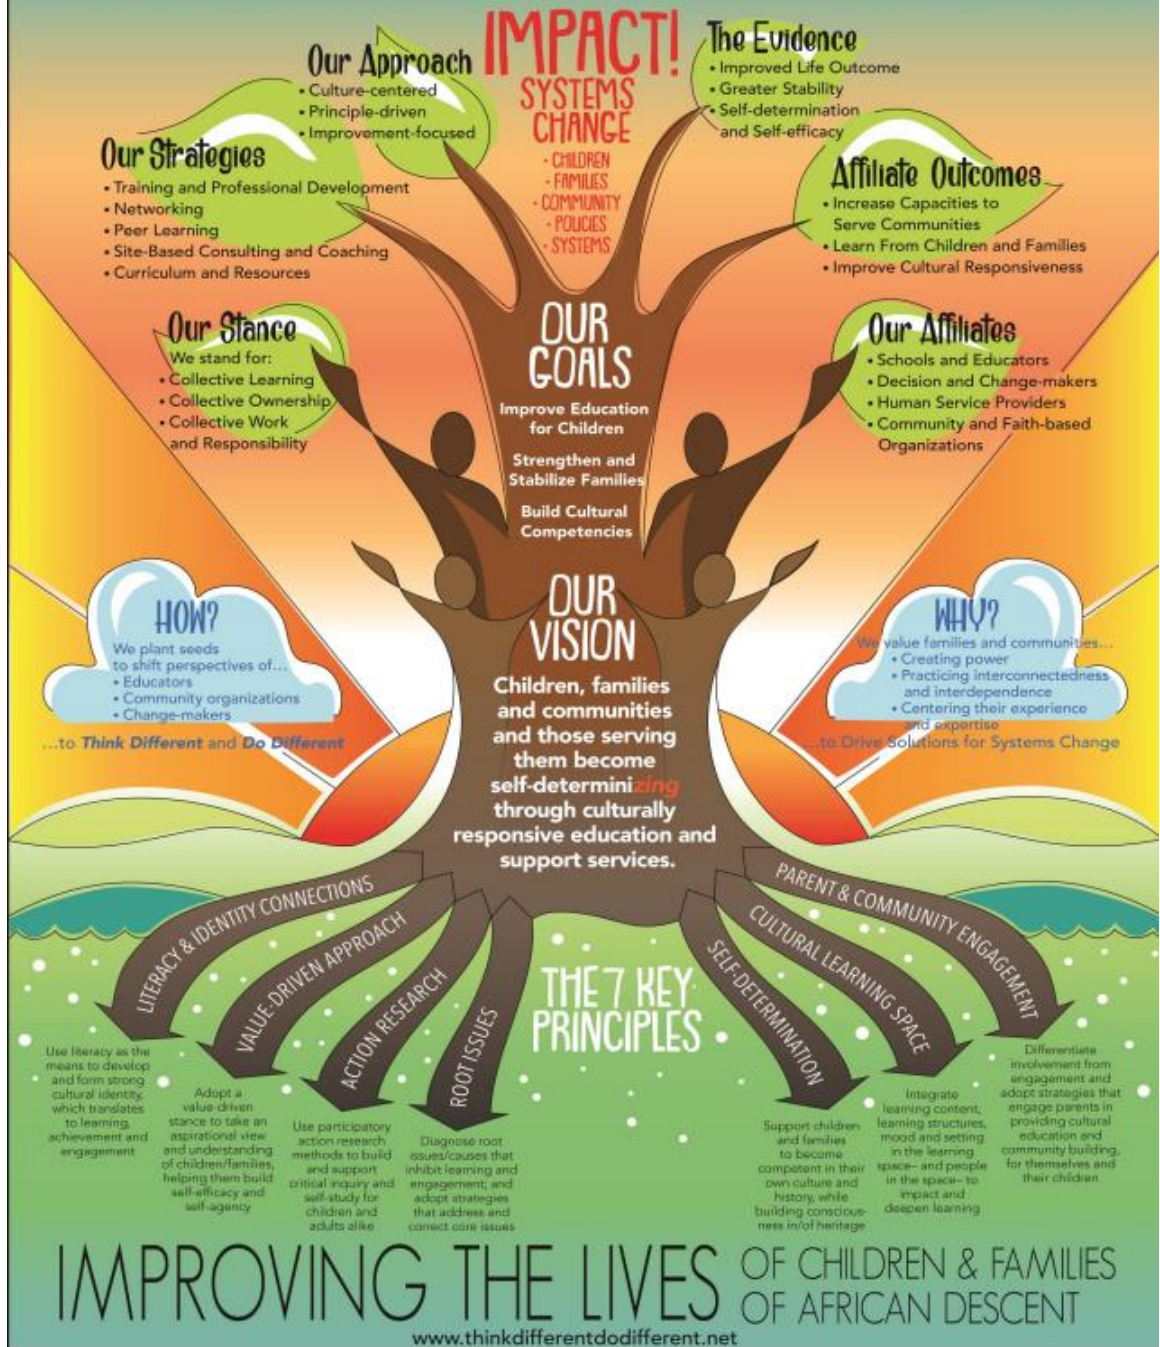

We work on these activities with and for:
 Communities who invite our support, and who have an active commitment to restoring and protecting the natural and cultural resources of their place

Because we believe:

Communities have a traditional and sacred role and responsibility for the lands and waters their places.	Communities rely on ecological health for physical, cultural, and spiritual sustenance.	Communities have knowledge, practice and relationships critical for successful resource management.
--	---	---

THINK DIFFERENT. DO DIFFERENT.

THEORY of CHANGE and TRANSFORMATION

Modèle inspiré par les technologies sociales d'Amérique Latine (Pozzebon, Tello-Rozas al., 2021)
